Your social life is defined as the activities you do with other people, for pleasure, when you are not working. It is important to have a social life, but what is right for one person won't be right for another. Some of us feel energised by spending lots of time with others, 1 some of us may feel drained, even if it's doing something we enjoy.

This is why finding a 2 in your social life is key. Spending too much time on your own, not 3 others, can make you feel lonely and 4 loneliness is known to impact on your mental health and 5 a low mood. Anyone can feel lonely at any time. This might be especially true if, 6 you are working from home and you are 7 on the social conversations that happen in the office. Other life changes also 8 periods of loneliness too, such as retirement, changing a job or becoming a parent.

It's important to recognize feelings or loneliness. There are ways to 9 a social life. But it be overwhelming 10 You can then find groups and activities related to those where you will be able to meet 11 people. There are groups aimed at new parents, at those who want to 12 a new sport for the first time or networking events for those in the same profession to meet up and 13 ideas.

On the other hand, it is 14 possible to have too much of a social life. If you feel like you're always doing something and there is never any 15 in your calendar for downtime, you could suffer social burnout or social 16. We all have our own social limit and it's important to recognize when you're feeling like it's all too much. Low mood, low energy, irritability and trouble sleeping could all be 17 of poor social health. Make sure you 18 some time in your diary when you're 19 for socialising and use this time to relax, 20 and recover.

Text 1

Anger over AI's role in exacerbating inequality could endanger the technology's future. In her new book Cogs and Monsters: What Economics Is, and What It Should Be, Diane Coyle, an economist at Cambridge University, argues that the digital economy requires new ways of thinking about progress. "Whatever we mean by the economy growing, by things getting better,

the gains will have to be more evenly shared than in the recent past," she writes. "An economy of tech millionaires or billionaires and gig workers, with middle-income jobs undercut by automation, will not be politically sustainable."

Improving living standards and increasing prosperity for more people will require greater use of digital technologies to boost productivity in various sectors, including health care and construction, says Coyle. But people can't be expected to embrace the changes if they're not seeing the benefits—if they're just seeing good jobs being destroyed.

In a recent interview with MIT Technology Review, Coyle said she fears that tech's inequality problem could be a roadblock to deploying AI. "We're talking about disruption," she says. "These are transformative technologies that change the ways we spend our time every day, that change business models that succeed." To make such "tremendous changes," she adds, you need social buy-in.

Instead, says Coyle, resentment is simmering among many as the benefits are perceived to go to elites in a handful of prosperous cities.

According to the Brookings Institution, a short list of eight American cities that included San Francisco, San Jose, Boston, and Seattle had roughly 38% of all tech jobs by 2019. New AI technologies are particularly concentrated: Brookings's Mark Muro and Sifan Liu estimate that just 15 cities account for two-thirds of the AI assets and capabilities in the United States (San Francisco and San Jose alone account for about one-quarter).

The dominance of a few cities in the invention and commercialization of AI means that geographical disparities in wealth will continue to soar. Not only will this foster political and social unrest, but it could, as Coyle suggests, hold back the sorts of AI technologies needed for regional economies to grow.

Part of the solution could lie in somehow loosening the stranglehold that Big Tech has on defining the AI agenda. That will likely take increased federal funding for research independent of the tech giants. Muro and others have suggested hefty federal funding to help create US regional innovation centers, for example.

A more immediate response is to broaden our digital imaginations to conceive of AI technologies that don't simply replace jobs but expand opportunities in the sectors that different parts of the country care most about, like health care, education, and manufacturing.

C, benefit people equally

D, be promoted forcefully

22. According to paragraph 2, digital technology should be useful to ______.

- A, bring about instant prosperity
- B, reduce people's workload
- C, raise overall work efficiency
- D, enhance cross-sector cooperation

23. What does Coyle fear about transformative technology?

- A. They may affect work-life balance.
- B. They may be impractical to deploy.
- C. They may incur huge expenditure.
- D. They may be unwelcome to the public.

24.Several American cities are mentioned to show_____

- A the uneven distribution of AI technologies in the US
- B, the disappointing prospect of tech jobs in the US
- C, the fast progress of US regional economies
- D, the increasing significance of US AI assets

25. With regard to Coyle concern, the author suggests_____

- A raising funds to start new AI projects
- B, encouraging collaboration in AI research
- C, guarding against the side effects of AI
- D, redefining the role of AI technologies

Text2

The UK is facing a future construction crisis because of a failure to plant trees to produce wood, Confor has warned. The forestry and wood trade body has called for urgent action to reduce the country's reliance on timber imports and provide a stable supply of wood for future generations. Currently only 20 percent of the UK's wood requirement is home-grown while it

remains the second-largest net importer of timber in the world.

Coming at a time of fresh incentives from the UK government for landowners to grow more trees, the trade body says these don't go far enough and fail to promote the benefits of planting them to boost timber supplies. "Not only are we facing a carbon crisis now, but we will also be facing a future construction crisis because of failure to plant trees to produce wood." said Stuart Goodall, chief executive of Confor. "For decades we have not taken responsibility for investing in our domestic wood supply, leaving us exposed to fluctuating prices and fighting for future supplies of wood as global demand rises and our own supplies fall."

The UK has ideal conditions for growing wood to build low-carbon homes and is a global leader in certifying that its forests are sustainably managed, Confor says. While around three quarters of Scottish homes are built from Scottish timber, the use of home-grown wood in England is only around 25 percent.

While productive tree planting can deliver real financial benefits to rural economies and contribute to the UK's net-zero strategy, the focus of government support continues to be on food production and the rewinding and planting of native woodland solely for biodiversity. Goodall add: "While food production and biodiversity are clearly of critical importance, we need our land to also provide secure supplies of wood for construction, manufacturing and contribute to net zero.

"While the UK government has stated its ambition for more tree planting, there has been little action on the ground." Confor is now calling for much greater impetus behind those aspirations to ensure we have enough wood to meet increasing demand."

26. It can be learned from paragraph 1 that the UK needs to ...

- A, increase its domestic wood supply
- B, reduce its demand for timber
- C, lower its wood production cost
- D. lift its control on timber imports

27. According to Confor, the UK government's fresh incentives

- A can hardly address construction crisis
- B, are believed to come at the wrong time
- C, seem to be misleading for landowners

D, will be costly to put into practice

28. The UK's exposure to fluctuational wood prices is a result of . .

- A government's inaction on timber imports
- B, inadequate investment in growing wood
- C, competition of timber traders at home
- D, wood products motive to maximise profits

29. Which of the following causes the shortage of wood supply in UK?

- A. Excessive timber consumption in construction.
- B. Unfavorable conditions for growing trees.
- C. Outdated technology for wood production.
- D. Farmers' unwillingness to plant trees.

30. What does Goodall think UK government should do?

- A. Subsidize the building
- B, Pay attention to rural economy
- C. Provide more support for tree planting
- D. Give priority to pursue net-zero strategy

Text3

One big challenge in keeping unsafe aging drivers off the road is convincing them that it is time to turn over the key. It is a complete life-changer when someone stops- or is forced to stop-driving, said former risk manager Anne M. Menke.

The American Medical Association advises physicians that in situation where clear evidence of substantial driving impairment implies a strong threat to patient and public safety, and where the physician's advice to discontinue driving privileges is ignored, it is desirable and ethical to notify the Department of Motor Vehicles, Menke wrote. "Some states require physicians to report, others allow but do not mandate reports, while a few consider a report breach of confidentiality. There could be liability and penalties if a physician does not act in accordance with state laws on reporting and confidentiality" she counseled.

Part of the problem in keeping older drivers safe is that the difficulties are addressed piecemeal by different professions with different focuses, including gerontologists, highway

administration officials, automotive engineers and others, said gerontologist Elizabeth Dugan.

"There's not a National Institute of Older Driver Studies," she said. "We need better evidence on what makes drivers unsafe" and what can help, said Dugan.

One thing that does seem to work is requiring drivers to report in person for license renewal.

Mandatory in-person renewal was associated with a 31 percent reduction in fatal crashes involving drivers 85 or older, according to one study. Passing vision tests also produced a similar decline in fatal crashes for those drivers, although there appeared to be no benefit from combining the two.

Many old drivers don't see eye doctors or can't afford to. Primary care providers have their hands full and may not be able to follow through with patients who have trouble driving because they can't turn their heads or remember where they are going—or have gotten shorter and haven't changed their seat settings sufficiently to reach car pedals easily,

As long as there are other cars on the roads, self-driving cars won't solve the problems of crashes, said Dugan. Avoiding dangers posed by all those human drivers would require to many algorithms, she said. But we need to do more to improve safety, said Dugan. "If we're going to have 100-year lives, we need cars that a 90-year-old can drive comfortably."

(1)

3	1./	Accordin	g to	Paragrap!	h1,	keeping unsat	fe aging	drivers of	f the road	

- A, is a new safety measure
- B, has become a disputed issue
- C, can be a tough task to complete
- D, will be beneficial to their health
- **32.**The American medical associations advice _____.
 - A, has won support from drivers
 - B, is generally considered unrealistic
 - C, is wide dismissed as unnecessary
 - D, has met with different responses
- **33.**According to Dugan, efforts to keep older drivers safe_____
 - A, have brought about big changes
 - B, need to be well coordinated

- C, have gained public concern
- D, call for relevant legal support
- **34.**Some older drivers have trouble driving because they tend to ______.
 - A, stick with bad driving habits
 - B, have a weakened memory
 - C, suffer from chronic pains
 - D, neglect car maintenance
- **35.**Dugan thinks that the solution to the problems of crashes may lie in______
 - A, upgrading self-driving vehicle
 - B, developing senior-friendly cars
 - C, renovating transport facilities
 - D, adjusting the age limit for drivers

Text4

If you look at the apps on your phone, chances are you have at least one related to your health—and probably several. Whether it is a mental health app, a fitness tracker, a connected health device or something else, many of us are taking advantage of this technology to keep better track of our health in some shape or form. Recent research from the Organization for the Review of Care and Health Applications found that 350,000 health apps were available on the market, 90,000 of which launched in 2020 alone.

While these apps have a great deal to offer, it is not always clear how the personal information we input is collected, safeguarded and shared online. Existing health privacy law, such as the Health Insurance Portability and Accountability Act, is primarily focused on the way hospitals, doctors' offices, clinics and insurance companies store health records online. The health information these apps and health data tracking wearables are collecting typically does not receive the same legal protections.

Without additional protections in place, companies may share (and potentially monetize) personal health information in a way consumers may not have authorized or anticipated. In 2021, Flo Health faced a Federal Trade Commission (FTC) investigation. The FTC alleged in a complaint that "despite express privacy claims, the company took control of users' sensitivity

fertility data and shared it with third parties." Flo Health and the FTC settled the matter with a Consent Order requiring the company to get app users' express affirmative consent before sharing their health information as well as to instruct the third parties to delete the data they had obtained.

Section 5 of the FTC Act empowers the FTC to initiate enforcement action against unfair or deceptive acts, meaning the FTC can only act after the fact if a company's privacy practices are misleading or cause unjustified consumer harm. While the FTC is doing what it can to ensure apps are keeping their promises to consumers around the handling of their sensitive health information, the rate at which these health apps are hitting the market demonstrates just how immense of a challenge this is.

As to the prospects for federal legislation, commentators suggest that comprehensive federal privacy legislation seems unlikely in the short term. States have begun implementing their own solutions to shore up protections for consumer-generated health data. California has been at the forefront of state privacy efforts with the California Consumer Privacy Act of 2018. Virginia, Colorado and Utah have also recently passed state consumer data privacy legislation.

36. The research findings are cited in paragraph 1 to show ...

- A, the prevalence of health apps
- B, the public concern over health
- C, popularity of smartphone
- D, the advancement of technology

37. What does the author imply about existing health privacy law?

- A. Its coverage needs to be extended.
- B. Its enforcement needs strenthening.
- C. It has discouraged medical misconduct.
- D. It has disappointed insurance companies.
- **38.**Before sharing its users' health information, Flo Health is required to _____.
 - A seek the approval of the FTC
 - B, find qualified third parties
 - C, remove irrelevant personal data
 - Dy obtain their explicit permission
- 39. What challenges is the FTC currently faced with?

- A. The complexity of health information.
- B. The rapid increase in new health apps.
- C. The subtle deceptiveness of health apps.
- D. The difficulty in assessing consumer harm.

40.It can be learned from the last paragraph that health date protection

- A, has been embraced by health app developers
- B, has been a focus of federal policy-making
- C, has encountered opposition in California
- D, has gained legislative support in some states

Part B

Directions:

High school students eager to stand out in the college application process often participate in a litany of extracurricular activities hoping to bolster their chances of admission a selective undergraduate institution.

However, college admissions experts say that the quality of a college hopeful's extracurricular activities matter more than the number of activities. he or she participates in.

Sue Rexford, the director of college guidance at the Charles. E. Smith Jewish Day School, says it is not necessary for a student, filling out the Common Application to list lo activities in the application

"No" college will expect that a students has a huge laundry list of extracurriculars that they have been passionately involved in each for an tended period of time, "Rexfon d wrote in an email.

Experts say it is toughen to distinguish oneself in a school-affiliated extracurricular activity that is common among high school students than it is to stand out while doing an uncommon activity.

The competition to stand out and make an impact is going to be much stiffer, and so if they 're going to do a popular activity, I'd say, be the best at it."says Sara Harherson, a college admission consultant.

High school students who have an impressive personal project they are working on

independently often impress colleges, experts say.

"For example, a student with an interest in entrepreneurship could demonstrate skills and potential by starting a profitable small business." Olivia Valdes, the founder or Zen Admissions consulting firm, wrote in an email.

Josoph Adegboyega—Edun, a Maryland High school guidance counselor, says unconventional, extracurricular activities can help students, impress college admissions offices, assuming they demonstrated, serious commitment."Again, since one of the big question. high school seniors muse consider is "What makes you unique?" having an uncommon, extracurricular activity, a conventional one is an advantage, "he wrote in an email.

Experts say demonstrating talent in at least one extracurricular activity can help in the college admissions process, especially at top-tier undergraduate institutions.

"Distinguishing yourself in one focused type of extracurricular activity can be a positive in the admissions process, especially for highly selective institutions, 431 where having top grades and test scores is not enough,"Katie Kelley admissions counselor at Ivy Wise admissions consultancy, wrote in an email. "Students need to have that quality or hook that will appeal to admissions officers and allow them to visualize how the student might come and enrich their campus community."

Extracurricular activities related to the college major declared on a college application are beneficial, experts suggest. "If you already know your major, having an extracurricular that fits into that major can be a big plus," says Mayghin Levine, the manager of educational opportunities with The Cabbage Patch Settlement House, a Louisville, Kentucky, nonprofit community center.

High school students who have had a strong positive influence on their community through an extracurricular activity may impress a college and win a scholarship, says Erica Gwyn, a former math and science magnet program assistant at a public high school who is now executive director of the Kaleidoscope Careers Academy in Atlanta, a nonprofit organization.

(1), 41.Sue Rexford

- A. Students who stand out in a specific extracurricular activity will be favored by top-tier institutions.
- B. Students whose extracurricular activity has benefited their community are likely to win a scholarship.

- C. Undertaking too many extracurricular activities will hardly be seen as a plus by colleges.
- D. Student who exhibits activity in doing business can impress colleges.
- E. High school students participating in popular activity should excel in it.
- F. Engaging in uncommon activity can demonstrate Students' determination and dedication.
- G. It is advisable for students to choose an extracurricular activity that is related to their future study at college.

42.Sara Harberson

- A Students who stand out in a specific extracurricular activity will be favored by top-tier institutions.
- B . Students whose extracurricular activity has benefited their community are likely to win a scholarship.
- C. Undertaking too many extracurricular activities will hardly be seen as a plus by colleges.
- D. Student who exhibits activity in doing business can impress colleges.
- E. High school students participating in popular activity should excel in it.
- F. Engaging in uncommon activity can demonstrate Students' determination and dedication.
- G. It is advisable for students to choose an extracurricular activity that is related to their future study at college.
- 43.Katie Kelley
- A Students who stand out in a specific extracurricular activity will be favored by top-tier institutions.
- B . Students whose extracurricular activity has benefited their community are likely to win a scholarship.
- C. Undertaking too many extracurricular activities will hardly be seen as a plus by colleges.
- D. Student who exhibits activity in doing business can impress colleges.
- E. High school students participating in popular activity should excel in it.
- F. Engaging in uncommon activity can demonstrate Students' determination and dedication.
- G. It is advisable for students to choose an extracurricular activity that is related to their future study at college.
- 44. Mayghin Levine

Section III Translation

46.Directions:

Read the following text carefully and then translate the underlined segments into Chinese. Write yours answers on the ANSWER SHEET. (10 points)

With the smell of coffee and fresh bread floating in the air, stalls bursting with colorful vegetables and tempting cheeses, and the buzz of friendly chats, farmers' markets are a feast for

the senses. They also provide an opportunity to talk to the people responsible for growing or raising your food, support your local economy and pick up fresh seasonal produce — all at the same time.

Farmers' markets are usually weekly or monthly events, most often with outdoor stalls, which allow farmers or producers to sell their food directly to customers. The size or regularity of markets can vary from season to season, depending on the area's agricultural calendar, and you're likely to find different produce on sale at different times of the year. By cutting out the middlemen, the farmers secure more profit for their produce. Shoppers also benefit from seeing exactly where — and to who — their money is going.

【答案】在咖啡和新鲜面包的香气中,摊位上陈列着色彩鲜艳的蔬菜和诱人的奶酪,你可以 听见人们友好聊天时发出的嗡嗡声,农贸市场就是一场感官盛宴。在这里,你不仅有机会与 负责种植或饲养食物的农民交流,助力当地经济,还可以同时购买到新鲜的时令农产品。

农贸市场通常是每周或每月举办的户外市场,让农民或生产者可以直接把食物销售给顾客。市场的规模和开市规律是根据当地的农业日历而有所变化,一年的不同时间里,你会发现市场上出售不同的农产品。通过绕过中间商,农民可以获得更多的利润。顾客也受益于能够清楚地知道他们的钱流向了哪里。

Section IV Writing

Part A

47. Directions:

Suppose you and Jack are going to do a survey on the protection of old houses in an ancient town. Write him an email to

- (1) put forward your plan, and
- (2) ask for his opinion.

Write your answer in about 100 words on the Answer Sheet.

Do not use your own name in your email, use "Li Ming"instead.

【参考范文】

Dear Jack,

I am delighted to have the opportunity to collaborate with you on the survey of the protection of old houses in Shunde, Guangdong. The data collection for this project is scheduled to conclude on December 29, 2023. I am writing to present my proposed plan.

To begin our survey, I suggest we make initial contact with the local government authorities responsible for the preservation of old houses. This step will enable us to gather crucial information about the number of old houses that have been identified and protected thus far.

Once we have the necessary data, we can proceed to the next stage by scheduling visits to these preserved old houses. This will allow us to observe and document their current condition, taking note of any required restoration or maintenance efforts.

I highly value your opinion and expertise in this field. I would greatly appreciate it if you could review the proposed plan and share your thoughts. Please feel free to reach out to me at your convenience.

Sincerely Yours,

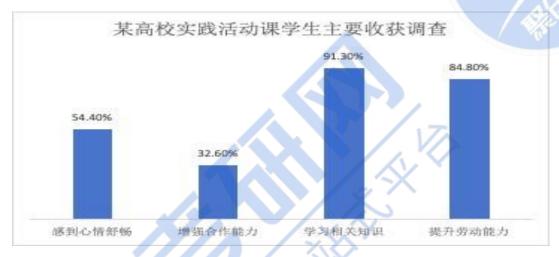

Li Ming

48. Directions:

Write an essay on the chart below. In your essay, you should

- 1) describe and interpret the chart, and
- 2) give your comments.

Write down answer in about 150 words on the Answer Sheet. (15points)

【参考范文】

The chart speaks of the main gains of students in labor practice course at a certain university. More specifically, more than 90% of college students gain relevant knowledge through participating in such courses, with 84.8% of students indicating improvement in practical skills, 54.4% citing enhanced cooperation, and 32.6% reporting a boost in their mood while engaging in these courses.

Firstly, it is possible that the labor practice courses offered at the university are specifically designed to equip students with practical knowledge and skills that directly relate to their future careers. These courses likely focus on real-world applications and industry-specific skills, enabling students to acquire knowledge and skills that are directly applicable to their future work. This can greatly benefit them in their professional development. Secondly, these courses may incorporate hands-on learning experiences and practical exercises. By engaging in real-world scenarios and actively participating in tasks or projects, students not only gain practical skills, but also develop teamwork and cooperation abilities. This type of experiential learning can positively impact their overall engagement and motivation, leading to a more positive mood while participating in these courses.

Having said the above, I believe that active participation in outdoor practical courses indeed offers several benefits to college students.
